The article talks about the nature and types of owls as well as their peculiarities. It mentions that the owl is a symbol of knowledge and wisdom in western culture. Many theories about owls make them more mysterious and cool. The article describes the different types of owls and shows their photos. It looks pretty cool!

The last part of the article depicts owls' habits. They are nocturnal birds of prey. They sleep and hunt at night. They hunt small creatures like rats, frogs or even lizards! What a big surprise!

I think this article is pretty interesting and fascinating. The author does great researches and describes many things we don't know about owls. Maybe I have quite a lot of interest in owls because of its look and intelligence, and I will give a high rate to this article.
