

How Amazing Life Could Be In 2100!

3D Lau Pok To

Have you ever imagined your life in 2100? Life could be so interesting when 2100 approaches. Here let me share a few predictions.

First, let me talk about food. The ingredients for our dishes will be more high-tech as meat would not come from animals in 2100. We could take the cells of livestock and grow them in plants. In that form, our meat could be planted! Through this way, we could save space to produce food to feed our livestock. Also, we would have an efficient system of planting our meat by 2100. So, we wouldn't have a problem with the price of meat, which is always higher than vegetables. The poor could afford to eat meat in every meal.

What about transport in 2100? Traveling in space would be easy. We could travel anywhere in the solar system by 2100. Could you imagine taking a photo with the Great Red Spot on Jupiter and posting that photo on Instagram to tell your friends what you do during a holiday? We might be able to find Migo on Pluto and make friends with him!
